## **Monitor Dynamics and Top 5 Certified Dealer to Provide Security to Major US Departmental Agency**

### **MonDyn's Unified Security Platform to Modernize PACS Systems for FIPS 201 Compliance Across the Enterprise**

SAN ANTONIO, Texas – Monitor Dynamics, the leader in Unified Access Control, Intrusion Detection and Identity Compliance for Government, announced that they have partnered with a leading Government Contractor, specializing in building automation solutions, to provide enterprise-wide unified security solutions to a major Executive Departmental Agency to the Government of the United States. Under the agency's blanket purchase agreement, MonDyn will deliver its industry-leading SAFeNet Unified Security Platform for this high-security government engagement.

With over 62 separate agencies operating within the bounds of its departmental infrastructure, this MonDyn client is recognized as the largest organization of its kind in the world. The Department's primary charter is to defend the laws of the United States and ensure public safety against all foreign and domestic threats. The Department's agencies are also part of the Department of Homeland Security and assist in combating terrorism, investigating federal crimes, prosecuting online misconduct, corporate fraud and corruption.

After considering all market solutions, the Department selected the SAFeNet system to upgrade its current security posture to a more robust and scalable enterprise-grade solution than they are currently using, while complying with security requirements mandated under HSPD-12 and FIPS 201. The unique customization features of MonDyn's award-winning open architecture platform will empower department security professionals to manage by exception across multiple layers of physical protection. As a security event occurs, the automated system gives security managers complete situational awareness capabilities while allowing them to command and control the situation as needed, across multiple remote locations, based on levels of threat to people, facilities and assets.

MonDyn is very proud to have been chosen as part of this key national security project by both the Contractor and the Client. The award is a major success for MonDyn and serves as validation that they are continuing to set the standard in unified access control, intrusion detection and identity compliance for the high-security government and Homeland Security marketplace.
