

Monitor Dynamics Chosen for Implementation at Two U.S. Marine Corps Bases

Project Being Integrated by Top 5 Global Defense Contractor

SAN ANTONIO, Texas – Monitor Dynamics, the leader in Unified Access Control and Intrusion Detection for the security industry announced that it has received purchase orders for its products as part of a unified security system implementation project at two Marine Corps bases located in the United States. The project is being implemented and maintained by a Certified MonDyn Dealer which is ranked as one of the five largest defense contractors in the world. Under terms of the contract, information on specific geographic locations, system specifications and assets being protected cannot be made available.

MonDyn's SAFENet Unified Security Platform is currently protecting numerous Marine Corps bases strategically located across the globe. SAFENet is one of the few products on the market today that have the security features and advanced capabilities to meet the requirements demanded by government locations managed by the Department of Defense. MonDyn delivers a centralized security command and control environment to its clients, which empowers them to manage and enforce security processes across an entire base in real-time.

The company has been providing managed security solutions to high-security Government clients for over thirty years. It is held in high regard by this market because its open architecture platform is able to meet stringent security guidelines, provide detailed real-time reports and integrate with third party security products that many other systems cannot.

The first base utilizing the SAFENet system is located on over 150,000 acres of land. It has been the recipient of multiple "Commander-in-Chief" Awards for institutional excellence, which recognized the base on a Department of Defense-level for effectively managing assets and developing quality programs to accomplish the mission of providing expeditionary forces in readiness. Innovations in military training and preparedness at this location test and deliver unique battlefield strategies that are vital to the national security of our country.

The base will install SAFENet to upgrade its current security posture with a more robust and scalable solution than they are currently operating. The unique customization and configuration features of SAFENet's award-winning Unified Security Platform will allow base security personnel to manage by exception across multiple layers of protection and detection. As an anomaly, intrusion or occurrence takes place, the automated platform commands a series of pre-configured security events to occur, allowing security managers to command and control building, access and video surveillance functions across multiple remote facilities, aimed at containing or minimizing the threat.

The second site maintains critical operations, training, services and support facilities that are essential for the readiness and global projection of ground combat forces and aviation units that protect and defend our country's assets. The base-wide unification delivered to this base by MonDyn products will empower security personnel to receive the actionable intelligence

necessary to make decisions in real-time, based on the exact levels of security needed, for specific geographic operating locations and perimeters across the base.
