

MonDyn Receives \$1.3 Million Order From Large High-Security Government Agency

SAN ANTONIO, Texas – Monitor Dynamics, the leader in Unified Access Control and Intrusion Detection Solutions for the security industry announced that it has been chosen to secure a large high-security government agency in our Nation’s Capital. The total project is worth over \$1.3 million dollars.

The customer, which provides critical services to the people of the United States, maintains the highest levels of layered security within its facilities and across its perimeter. The Directors and Administrators of this agency require the highest degree of unified access control, intrusion detection management and integrated security management available. Their mission is made possible by researching, testing and choosing the right products and professional services to meet their stringent security requirements.

The agency is also part of several international governmental organizations that share their research to identify security improvement efforts that meet mandated requirements related to Homeland Security Presidential Directive 12 (HSPD-12), Federal Information Processing Standard 201 (FIPS 201) and the Personal Identity Verification (PIV) of federal employees and contractors. MonDyn delivers proven solutions that empower their government-based clients to comply with these mandates while keeping major components of their existing security infrastructure in place to reduce costs.

“The MonDyn team is able to meet the unified security requirements of all government agencies and departments to assist them in meeting FIPS 201 and PIV mandates today. The SAFEnet platform’s open architecture design allows us to customize our solution as needed to give us a competitive advantage in the marketplace as there is no other security manufacturer that can deliver this type of solution in one turn-key package.”
